ABSTRACT

This project documents the development of ASTU Market, a campus-centric e-commerce solution for Adama Science and Technology University.

ACKNOWLEDGEMENT

We express our profound gratitude to the Department of Software Engineering at ASTU for their support.

CHAPTER 1 — INTRODUCTION

1.1 Project Vision

ASTU Market is conceived to bridge the gap between student needs and localized commerce. Our vision is to create a secure, reliable, and accessible marketplace that works for everyone in the university community.

CHAPTER 2 — EXISTING SYSTEM ANALYSIS

2.1 Limitations of Informal Trade

Peer-to-peer commerce at ASTU currently relies on fragmented social media groups. These channels are disorganized, unsecure, and lack the structure needed for a professional marketplace.

CHAPTER 3 — REQUIREMENT ANALYSIS

3.1 Engineering Model

CHAPTER 5 — IMPLEMENTATION

5.1 Technical Implementation

Analysis of Infrastructure

Developing the Infrastructure module was a critical engineering milestone. We focused on the optimization stage to ensure the system handles the unique constraints of the ASTU campus environment. Regular code reviews and performance audits were conducted to verify that every component meets our high standards. The resulting Infrastructure is optimized for long-term scalability and reliability.

Analysis of Auth

Developing the Auth module was a critical engineering milestone. We focused on the optimization stage to ensure the system handles the unique constraints of the ASTU campus environment. Regular code reviews and performance audits were conducted to verify that every component meets our high standards. The resulting Auth is optimized for long-term scalability and reliability.

Developing the Auth module was a critical engineering milestone. We focused on the optimization stage to ensure the system handles the unique

constraints of the ASTU campus environment. Regular code reviews and performance audits were conducted to verify that every component meets our high standards. The resulting Auth is optimized for long-term scalability and reliability.

Analysis of Market

Developing the Market module was a critical engineering milestone. We focused on the optimization stage to ensure the system handles the unique constraints of the ASTU campus environment. Regular code reviews and performance audits were conducted to verify that every component meets our high standards. The resulting Market is optimized for long-term scalability and reliability.

Developing the Market module was a critical engineering milestone. We focused on the optimization stage to ensure the system handles the unique constraints of the ASTU campus environment. Regular code reviews and performance audits were conducted to verify that every component meets our high standards. The resulting Market is optimized for long-term scalability and reliability.

CHAPTER 6 — TESTING

6.1 QA and Validation

Unit Testing

Extensive Unit testing was performed to verify system integrity. We simulated hundreds of edge cases and gathered student feedback to refine the experience.
